

Different banks. One way to compare.

Banking Campaigns Comparator

A research workspace to capture public product pages, review their features and compare how banks communicate.

Lien - Team lead

Gaetan - Data scientist

Hussein - Data scientist & new father

One workflow. From page to comparison.

The same evidence follows the page through capture, review and comparison.

01 CAPTURE

Save what the visitor sees
(text + image)

02 LABEL

Text & Content	Automation
Messaging & Tone	Automation
Images & Visuals	Human review
Layout & Page Structure	Human review
Colour & Design	Human review
Call to Action	Automation
Product & Value Proposition	Human review

Describe it with shared criteria.

03 COMPARE

Explore differences across pages.

Why it matters: one framework replaces scattered screenshots and inconsistent notes.

Let's follow one page through the app.

A 90-second walkthrough using saved evidence, so we can focus on the research process.

Campaign labels

In Progress

Review & complete labels

Bank	Product	Product Category	Language
Crelan	Savings account	Savings Account	Dutch

37% complete · 25/68 fields

► Labeling guidance

Supported fields were filled during scraping. Review them and complete the remaining fields.

1 Identification & Metadata
4/4 recorded

SECTION 1 OF 9
Identification & Metadata
4/4 fields recorded

01 Open its capture

What did we collect?

02 Review a label

What does this value mean?

03 Compare two pages

Where do they differ?

Demo route: Dataset → Page details → Labels → Compare

Retrieve automatically product urls

For each bank, we first need to automatically find the urls of the different product categories.

Test categorization

Subset of urls : 5 banks, 5 products, compute matching score with NLP

Importance of a good matching

- SEO (search engine optimization) : google search
- GEO (generative engine optimization) : what LLMs thinks about your product based on your website, customer rating on forums, and coherence

Analyze objectively a webpage.

Capture web pages and label their content to further compare them.

Spot a difference. Then explain it.

Select comparable pages, choose a feature, and inspect the values behind the chart.

01

Read the chart

A higher score describes the scale; it does not mean better performance.

02

Open the details

Compare exact labels and see which values are still missing.

03

Check the capture

Return to the page before drawing a research conclusion.

The product shows you numbers, but does not tell you which is better.
You should draw your conclusions based on your own strategy.

What is automated — and what stays human?

The next step is broader coverage and better validation, not removing the reviewer.

AVAILABLE NOW

- Capture & store labels
- Automatic labeling features:
 - Text & content
 - Messaging & tone
 - Images & visuals
 - CTA

NEXT DEVELOPMENT

- More sources
- Calibrate scoring rules
- Validate with marketing team
- Increase list of computed labels

HUMAN REVIEW

- Visual clarity and meaning
- Ambiguous messaging
- Final research conclusions
